Cloud24x7

CLOUD24x7 : Cybersecurity Solutions

FireSecure

Unique Firewall Assessment, Audits, Compliance checks, Configuration Analysis, Policy Management, Hardening & Remediation. (Vendor Agnostic Firewalls)

SecurePlus

Comprehensive Cybersecurity Assessment, SIEM, SOC, Thret Intelligence, Breach Detection, Incident Response, Change Management, Monitoring, Alerting & Reporting.

Vulnerabilty Assessment

Detailed Discovery of Vulnerabilities on Network. Covers OWASP Top 10 CVE/NVDB/SANS Top 20 vulnerabilities.

Penetration Testing

Identifying and analyse threat that could potentially harm the assets.

Phishnet

Social Engineering, Training Aawarness, Phishing Campaigns. On Demand Training

Discover

Cloud24x7next-generation monitoring platform uses a combination of intelligent rules, algorithms, and signatures to detect a variety of malware like worms, Trojans, backdoor programs, viruses, spyware/grayware, adware, and other threats.

Detect

Advanced **threat detection** (ATD) is a type of security that goes beyond basic security analysis. It is built into "appliances" and other solutions that work on a deeper level to fix security vulnerabilities and prevent cyberthreats.

Defend

Cybersecurity consulting and data security lifecycle management, data breach detection and prevention, end of life data destruction.

Security has burgeoned to be a 'must have' in today's world of complex network environments, huge IT infrastructures and innovative and sophisticated forms of cyber threats. With technological advancements, cyber-attacks are witnessing advancements too, with every turn of the internet.

Small and midsized enterprises (SME) are more attractive targets because they tend to be less secure and because automation allows modern cybercriminals to mass produce attacks for little investment. Those victimized by automated attacks tend to fall into what experts call the "low-hanging fruit" category. And SMEs tend to be in that category much more than larger enterprises.

There is a high need for security in the SME market. The numbers speak for itself, 60% of all targeted attacks struck small and medium-sized enterprises. 60% of such enterprises fail within six months of being hacked. So, for your clients, security is literally a matter of life or death for their businesses..

Service Features and Benefits
Our Security Operation Center brings together cutting-edge technology and skilled expertise in offering solutions for network security monitoring and management so that business owners and IT security experts no longer have to worry about constant threats to their businesses.

Through the solutions we offer, businesses and corporations have access to unexampled security monitoring and response processes supported by strict service agreements for our client's networks.

Unified Cybersecurity

- Fully White-Labeled Security Operation Center (SOC)

- Fully White-Labeled Managed Security Services (MSS)

- Security Auditing and Remediation Services (FireSecure / NetSecure)

- Phishing as a Service (PhishNet)

- Cloud-based Security Monitoring & Management Platform (SecurityFIRST)

- Vulnerability Assessment and Penetration Services (VAPT)

SERVICES AVAILABLE

Security Operations Center
